3 如何获得标本

4 标本的应用

1 正常人体结构

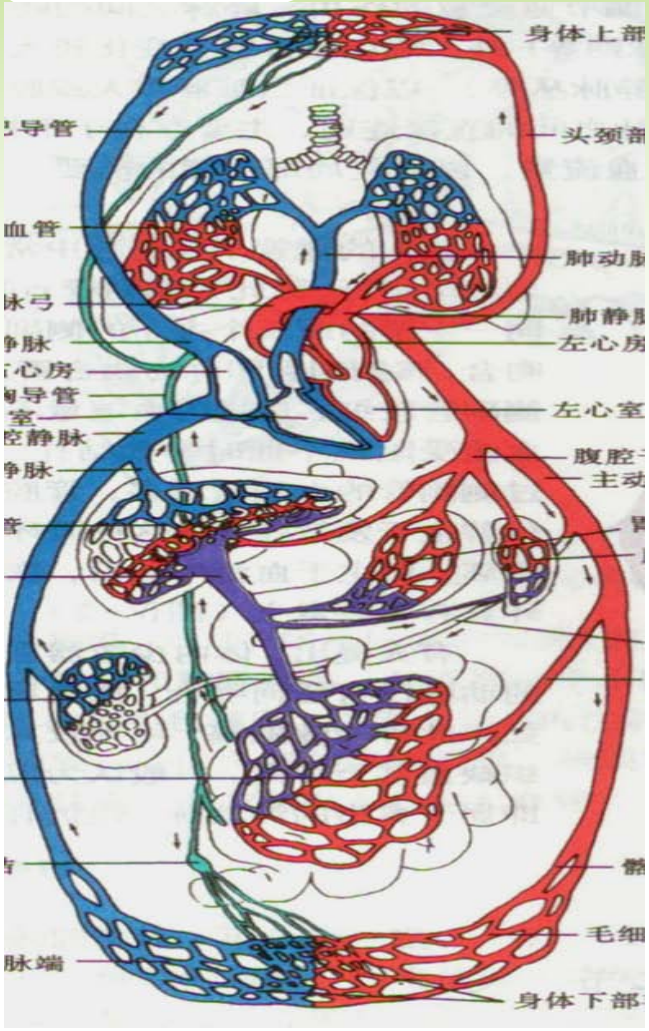

关于人体骨骼系统

人骨共有２０６块，以其分布部位不同分为躯干骨、颅骨和四肢骨。

骨骼肌跨过一个或多个关节，附着在两块或两块以上的骨面上，在神经系统支配下，骨骼肌收缩，牵拉骨骼，产生各种运动。

骨的表层致密而坚硬，叫骨密质；骨的内部呈蜂窝状，叫骨松质；骨中的空腔叫部分叫骨髓腔，中央充满骨髓。

1 循 环 系 统

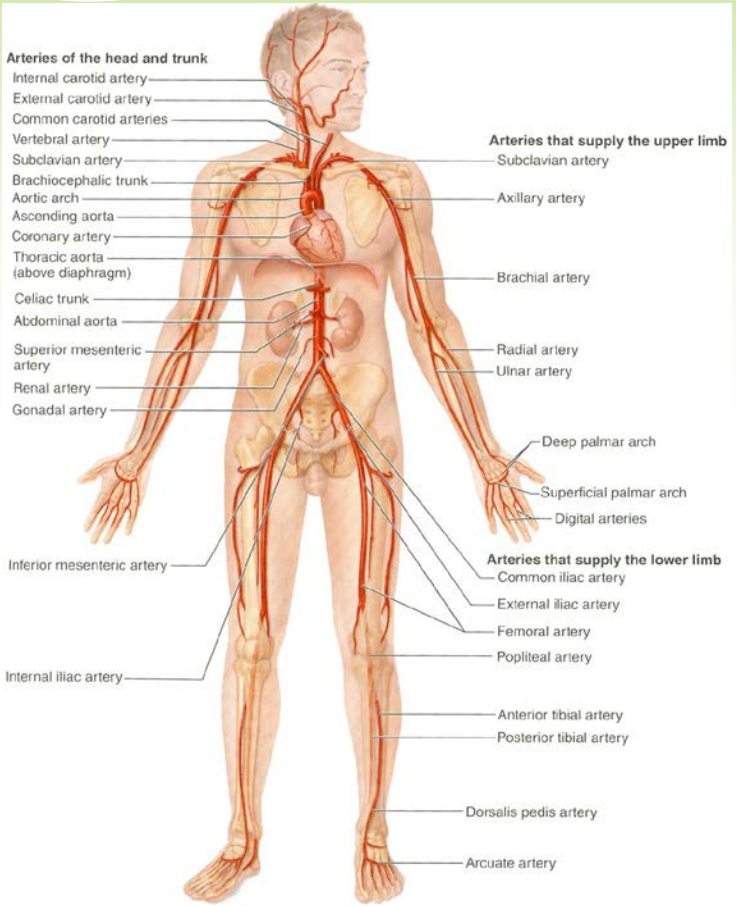

关于人体的血液的循环

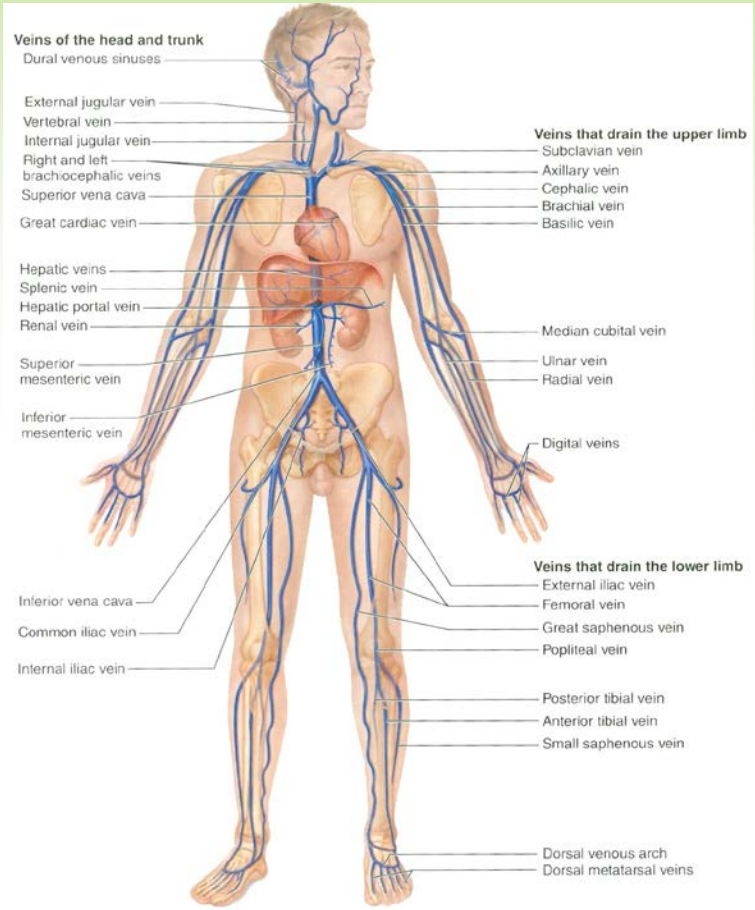

血管是血液流动的管道，分为动脉、静脉和毛细血管三种。

动脉起自心脏、不断分枝，口径渐渐变细，管壁渐渐变薄，最后分成大量的毛细血管，分布到全身各组织和细胞。毛细血管再逐渐汇合成静脉，最后返回心脏。

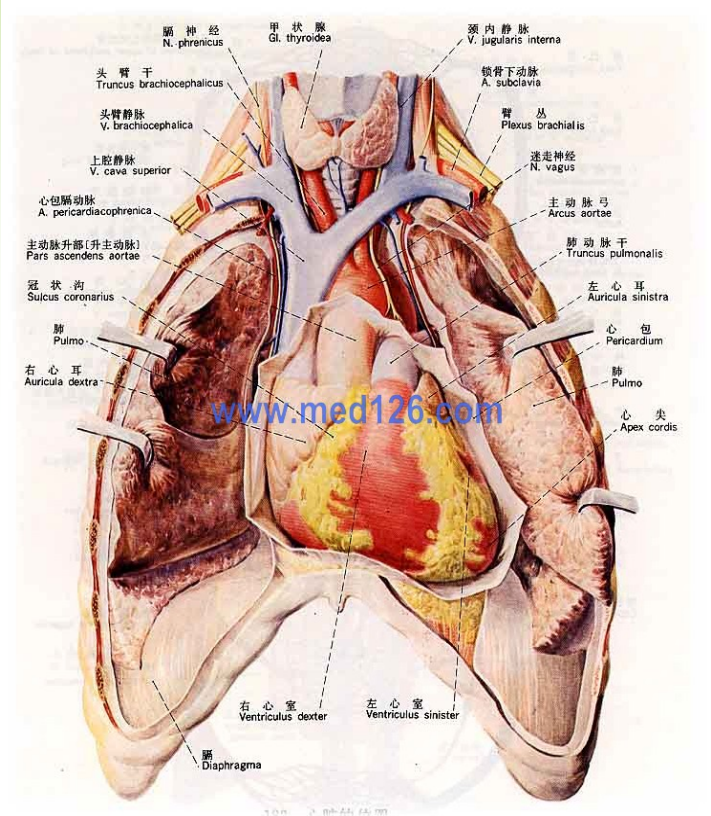

动脉和静脉是输送血液的管道，而毛细血管则是血液与组织进行的物质交换的场所。

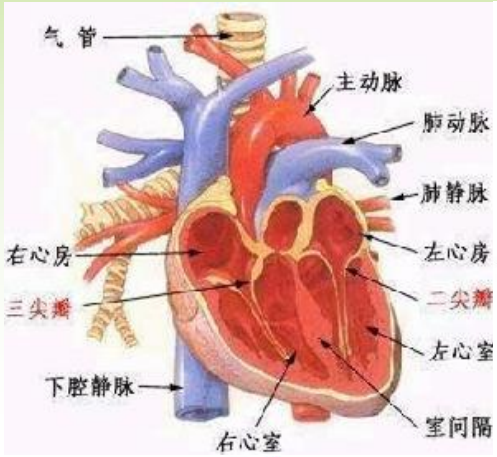

1 循 环 系 统

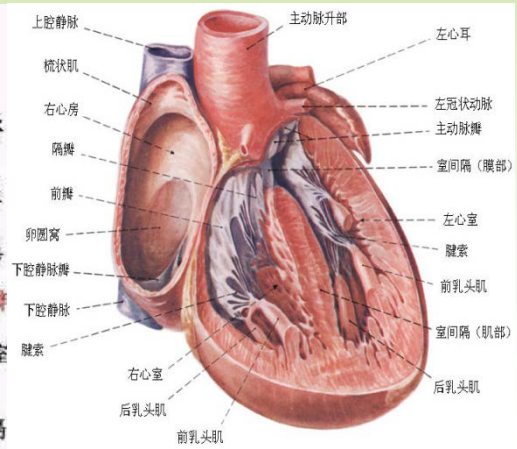

Arteries of the head and trunk
Internal carotid artery
External carotid artery
Common carotid arteries
Vertebral artery
Subclavian artery
Brachiocephalic trunk
Aortic arch
Ascending aorta
Coronary artery
Thoracic aorta (above diaphragm)
Celiac trunk
Abdominal aorta
Superior mesenteric artery
Renal artery
Gonadal artery
Inferior mesenteric artery
Internal iliac artery
Arteries that supply the upper limb
Subclavian artery
Axillary artery
Brachial artery
Radial artery
Ulnar artery
Deep palmar arch
Superficial palmar arch
Digital arteries
Arteries that supply the lower limb
Common iliac artery
External iliac artery
Femoral artery
Popliteal artery
Anterior tibial artery
Posterior tibial artery
Dorsalis pedis artery
Arcuate artery

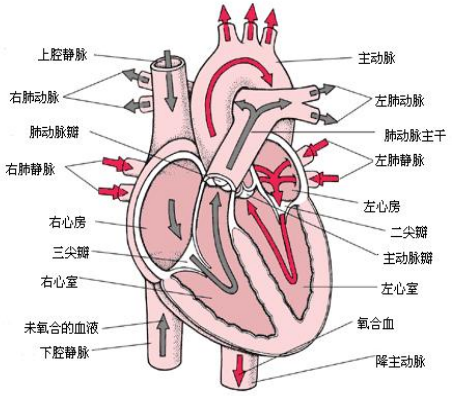

Veins of the head and trunk
Dural venous sinuses
External jugular vein
Vertebral vein
Internal jugular vein
Right and left brachiocephalic veins
Superior vena cava
Great cardiac vein
Hepatic veins
Splenic vein
Hepatic portal vein
Renal vein
Superior mesenteric vein
Inferior mesenteric vein
Inferior vena cava
Common iliac vein
Internal iliac vein
Veins that drain the upper limb
Subclavian vein
Axillary vein
Cephalic vein
Brachial vein
Basilic vein
Median cubital vein
Ulnar vein
Radial vein
Digital veins
Veins that drain the lower limb
External iliac vein
Femoral vein
Great saphenous vein
Popliteal vein
Posterior tibial vein
Anterior tibial vein
Small saphenous vein
Dorsal venous arch
Dorsal metatarsal veins

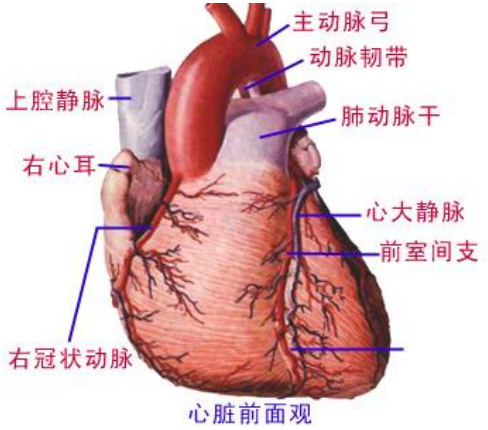

1 循环系统

膈神经
N. phrenicus

1 呼 吸 系 统

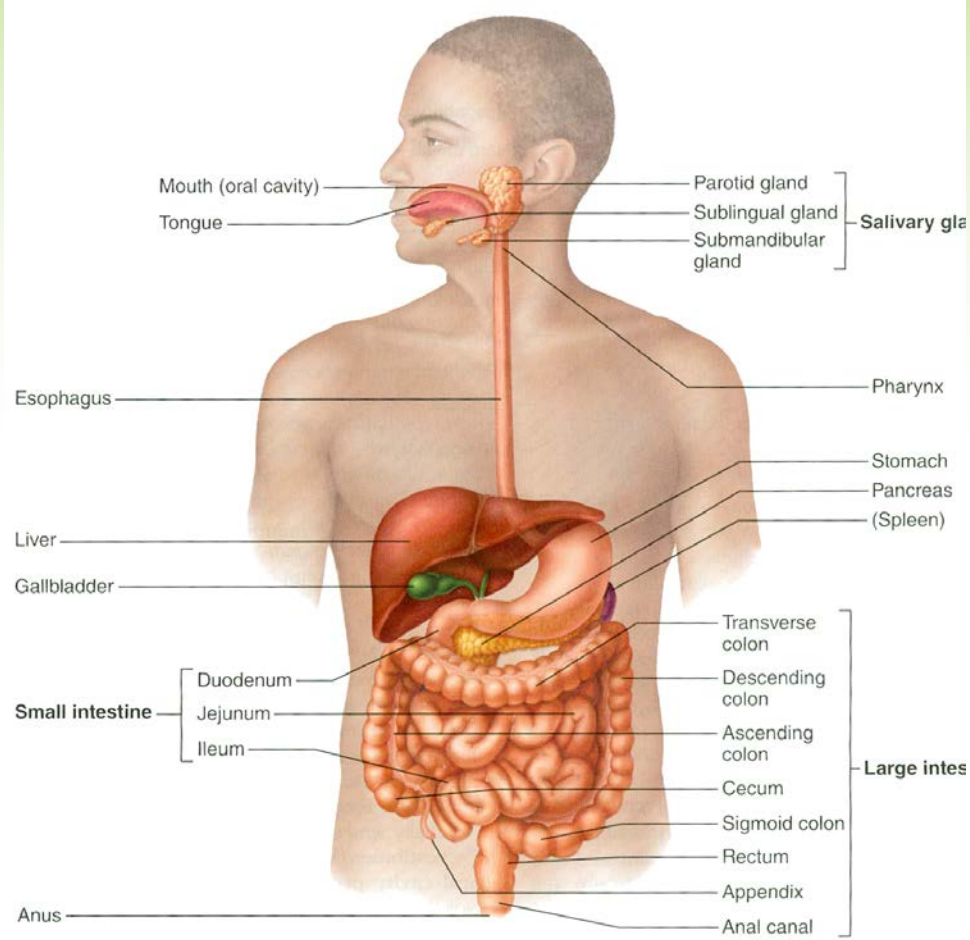

关于人体的呼吸换气

呼吸系统由呼吸道和肺组成，前者传送气体，后者进行气体交换。

呼吸道包括鼻、咽、喉、气管和支气管以上的部分称为上呼吸道；气管部分为下呼吸道。

呼吸系统的功能就是不断地从外界吸入氧，并将体内氧化过程中产生的二氧化碳排出体外，以保证人体正常生命活动的进行。

1 消 化 系 统

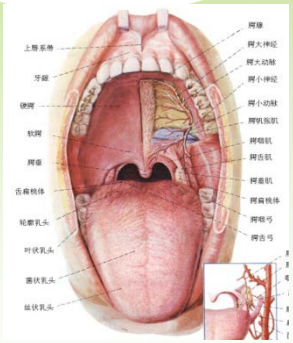

关于人体的消化、吸收

消化系统由消化管和消化腺两大部分组成。

消化管包括口腔、咽、食管、胃、小肠（十二指肠、空肠、回肠）和大肠（盲肠、结肠、直肠、肛管）等部。临床上常把口腔到十二指肠的这一段称上消化道，空肠以下的部分称下消化道。

消化腺有小消化腺和大消化腺两种。小消化腺散在于消化管各部的管壁内，大消化腺有三对唾液腺（腮腺、下颌下腺、舌下腺）、肝、食管腺、胃肠腺和胰腺。

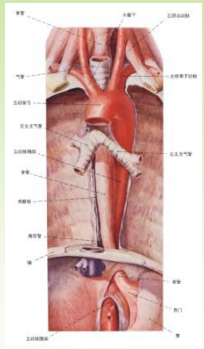

1 消 化 系 统

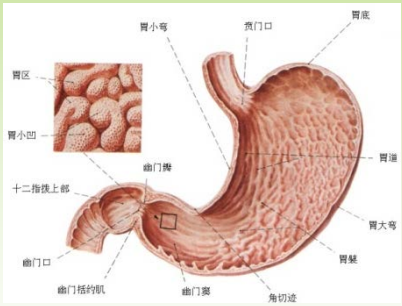

口腔 oral cavity

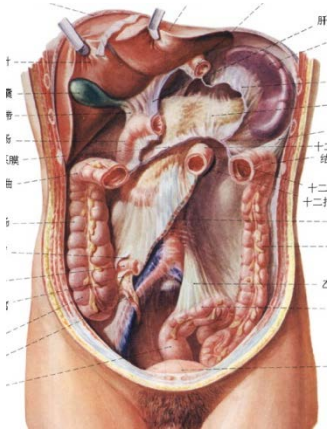

咽pharynx

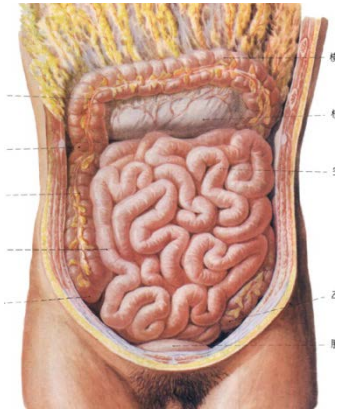

食管esophagus

胃stomach

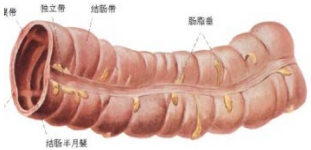

十二指肠duodenum

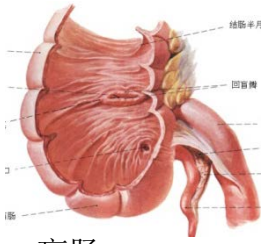

小肠small intestine

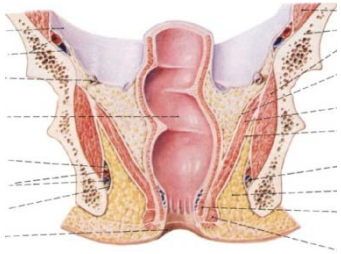

空肠jejunum

结肠colon

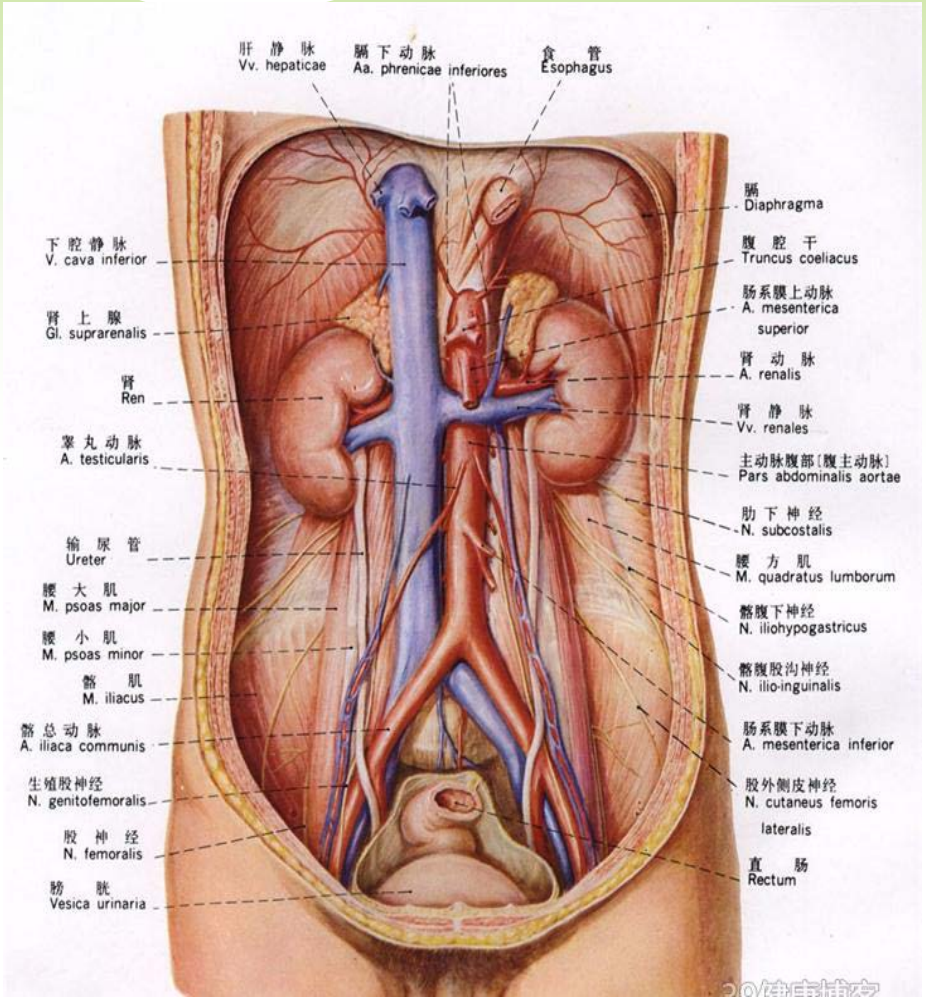

盲肠cecum

直肠rectum

1 泌 尿 系 统

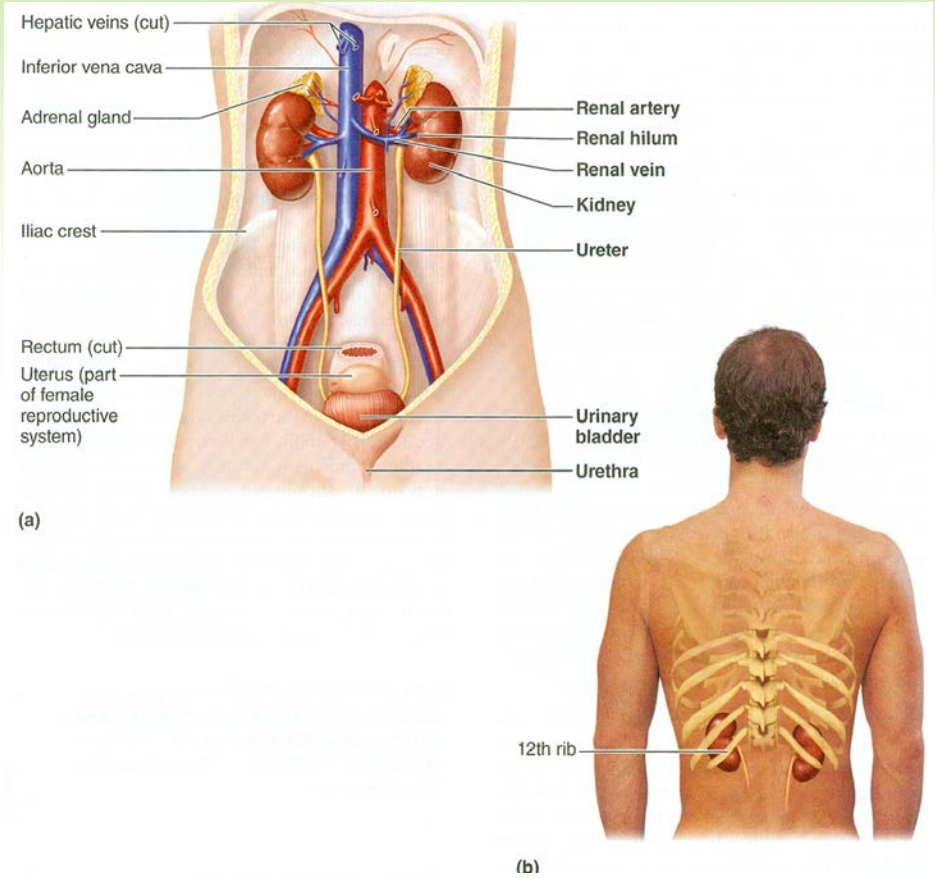

关于人体尿液的形成和排出

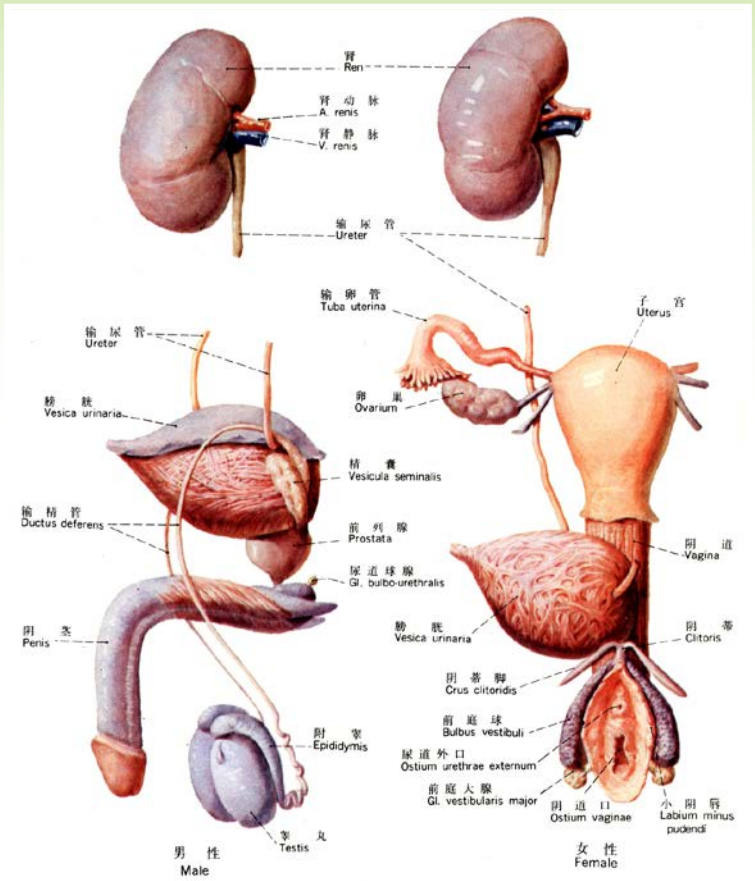

泌尿系统由肾、输尿管、膀胱及尿道组成。

主要功能为排泄。是机体代谢过程中所产生的各种不为机体所利用或者有害的物质向体外输送的生理过程。

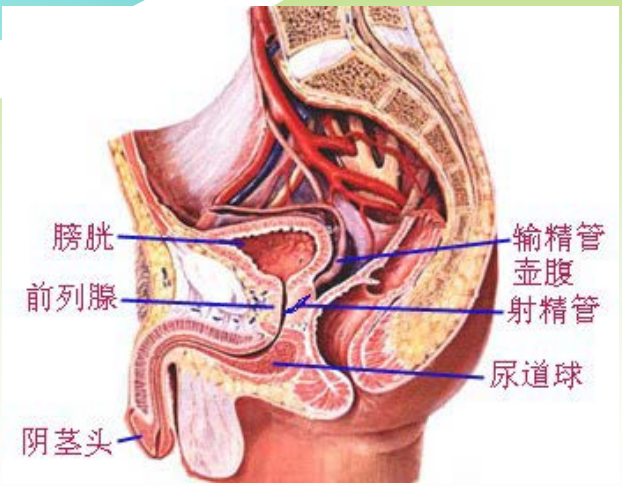

被排出的物质一部分是营养物质的代谢产物；另一部分是衰老的细胞破坏时所形成的产物。此外，排泄物中还包括一些随食物摄入的多余物质，如多余的水和无机盐类。

1 生 殖 系 统

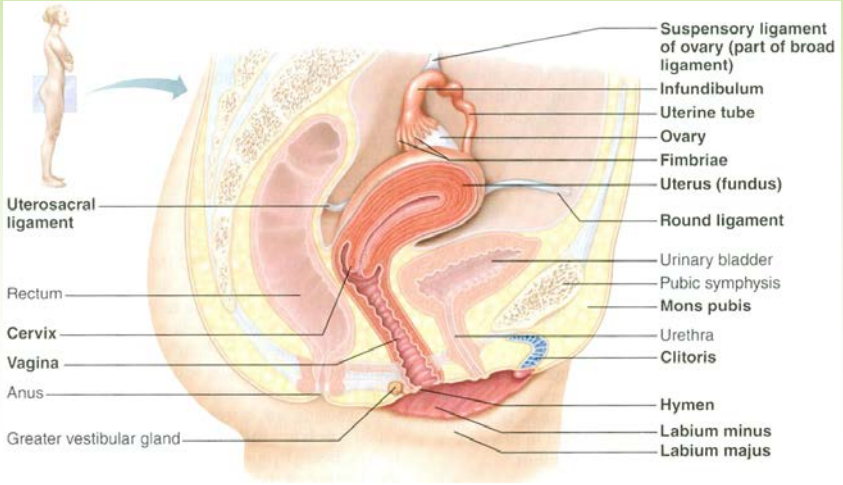

关于人体生殖系统

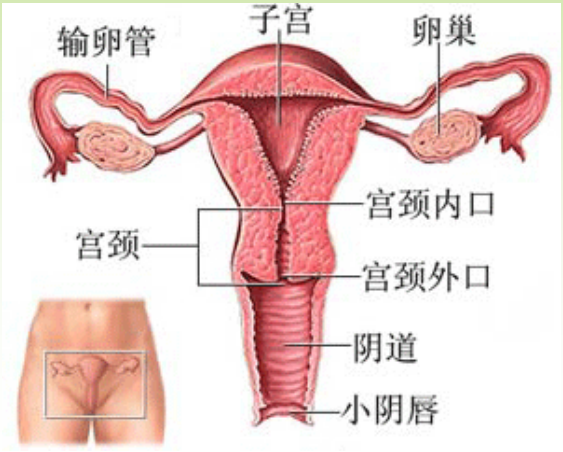

生殖系统有男性和女性两类。按生殖器所在部位，又分为内生殖器和外生殖器两部分。

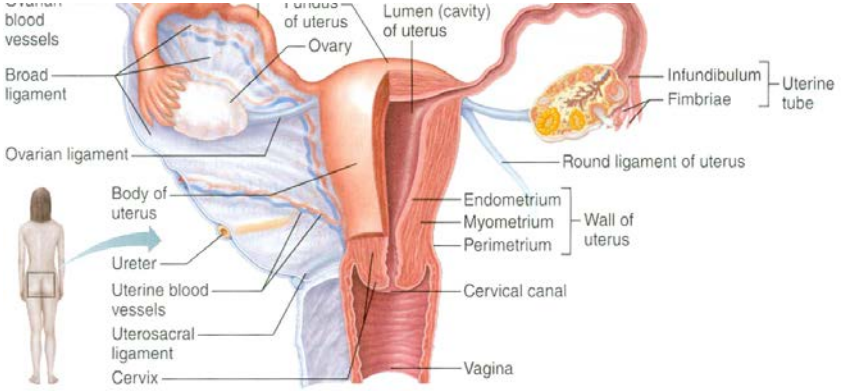

男性内生殖器包括睾丸、附睾、输精管、射精管、精囊腺、前列腺等。外生殖器有阴茎和阴囊。

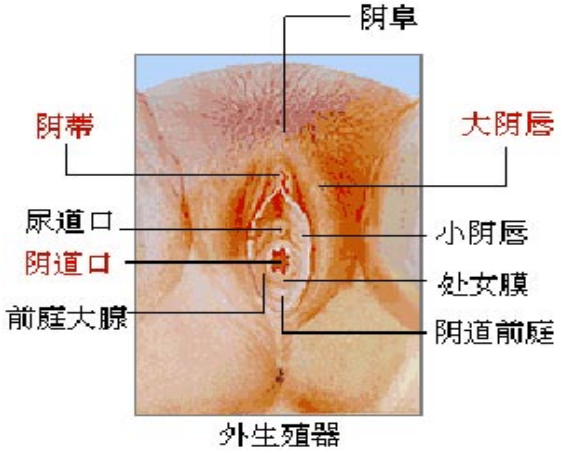

女性内生殖器包括卵巢、输卵管、子宫和阴道。外生殖器有阴阜、阴蒂、大阴唇、处女膜和前庭大腺等

1 生 殖 系 统

Suspensory ligament of ovary (part of broad ligament)
Infundibulum
Uterine tube
Ovary
Fimbriae
Uterus (fundus)
Uterosacral ligament
Round ligament
